Til ny streaming service (Annonce på engelsk)

Senior Data Engineer for new music streaming service

Why you want to work with us :

We are building a personalized music streaming service and are launching globally. We need you and your expertise to join us in improving and expanding the Moodagent services, enabling us to bring better music to even more people. Check out :

What we are looking for :

A senior data engineer to join our User & Social team at our headquarters in central Copenhagen. In collaboration with machine learning engineers, data scientists, and software developers, you'll be working with cutting-edge technologies at the crossroads between music, SoMe, and data engineering.

Making music social is a core part of our product and we want to bring the social features of the app to a new level by utilizing our highly relational data on music and users to create socially engaging and personalized features.

As a candidate we expect you to have a proven track record of providing value by building production-ready scalable data pipelines.

Ideally, you're experienced in working with graph databases, distributed event streaming platforms, and ETL pipelines.

Responsibilities :

- Collaborate with data scientists and ML engineers on building, developing, and scaling state-of-the-art production-ready data pipelines powering the social aspects of the Moodagent App.
- Collaborate with software developers, data scientists and machine learning engineers on building ML-centric music-oriented SoMe features
- Collaborate with data scientists and machine learning engineers on developing novel ways of leveraging our highly relational data to create business value

Desired abilities and skills :

- Hold a MSc. or higher in Computer Science, Software Engineering, or related technical disciplines.
- Have 5+ years of experience in the industry working with large scale data and MLOps
- Have experience with the life-cycle of developing solid data pipelines
- Are familiar with AWS cloud computing technology.
- Are fluent in written / verbal English

We imagine you have some of the following qualifications :

- Mastery of Python
- Experience with graph databases (AWS Neptune, Neo4J, Gremlin)
- Experience with ETL pipelines using Spark (PySpark, AWS EMR)
- Experience with distributed event streaming platforms, such as Kafka
- Knowledge of C# is a plus

We offer :

- A position with room for growth
- A diverse team of colleagues from more than 15 different countries
- Friday bars, a summer party & holiday gathering (all covid permitting)
- Social clubs including running, football, FIFA & foosball
- Flexible working hours
- Great office space in central Copenhagen with a view over the canals
- Laptop of your choice
- Endless caffeine to keep you jamming

About us :

Moodagent is a company built by and for music enthusiasts. It is a celebration of music as an important piece of our culture, its impact on our lives, and the sense of community it fosters.

At Moodagent, we blend our longstanding AI technology with the best of you, creating the most personalized music streaming experience out there.

Moodagent is redefining what it means to make, listen and share music one playlist at a time.

Our team is a close-knit bunch of music-loving software developers, design thinkers, musicologists, data scientists, and machine learning experts who come from all corners of the world.

We have people working in big data, microservices, cloud computing, artificial intelligence, scalable infrastructure, and app creation.

We have an informal tone and a shared passion for music.
